

**TELEMATICS MADE EASY**

# GEM ONE

You manage a fleet of forklifts, mobile elevating work platforms, earth-moving equipment and other industrial equipment. Business is good and everything is under control. But are you sure of that?

Do you know where your equipment is at any given time? Do you know who is operating your equipment, or how many hours each machine has been active? When your machines need servicing, or whether the batteries are properly charged?

**GEM One is a telematics solution that gives you the data and insights you need to operate your fleet safely and efficiently. You make your fleet more productive, and make more money.**

## WHAT'S IN IT FOR YOU? THE GEM ONE BENEFITS

### Track & Trace

You always know exactly where your machines are. Instantly check the whereabouts of your machines via GPS. This comes in handy when you need to pick up the machine, service it, or in the unfortunate event that it has been stolen.

### Operational efficiency

Time is money. With GEM One, you know exactly how much time each of your machines has been used for. Was there excess usage? Then you follow it up appropriately.

### Security & Safety

The driver authentication system means you know exactly who has been operating your machine. If somebody who is not authorised gets into the driver's seat, the machine will not operate.

Know exactly what your drivers have been up to. Via the tracker, GEM One records information about the behaviour of your drivers. This gives you the power to make improvements with driver training, or by taking disciplinary actions if necessary.

### Service & Maintenance

Service your machines on time, every time. Based on the actual usage data, we tell you the ideal servicing schedule to keep each machine functioning at its best.

Keep track of the servicing and maintenance for every machine in your fleet, including spare parts.

## HOW DOES IT WORK?

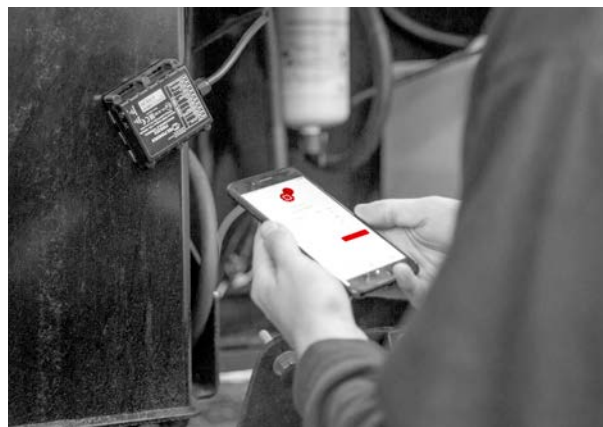

You install GEM One tracking devices in all of your machines. These enable GEM One to collect and process data from each machine. You receive insights and reports on your machines via the GEM One online platform. From the location of each machine to its usage, and much more. This data is accessible online at all times, so you have all the information you need at your fingertips.

Does your machine already have a tracking device? Then it's almost ready for GEM One. We'll connect your existing tracker to our portal, so you'll have all your data at hand in no time.

## WANT TO TAKE A CLOSER LOOK?

Still not convinced? Request your free GEM One demo today. Go to [www.gemone.com/demo](http://www.gemone.com/demo) and fill in the form. Our sales team will contact you as soon as possible to give you more information and a demo.
